- Knit Cuff Design
Easy to meet multiple work needs
Extra Soft
- Back Collar Design
Strong Adhesive
Velcro on the back neckline
Firm and safe to use

AAMI PB70 GUIDELINES

LEVEL	TEST METHOD	TEST DEFINITION	REQUIREMENT	EXPECTED BARRIER EFFECTIVENESS	ANTICIPATED FLUID EXPOSURE
AAMI LEVEL 1	AATCC 42 Impact penetration	Measures the ability of a material to resist water penetration under spray impact	Water impact ≤ 4.5 g	Minimal water resistance (some resistance to water spray)	MINIMAL FLUID LEVELS
AAMI LEVEL 2	AATCC 42 Impact penetration	Measures the ability of a material to resist water penetration under spray impact	Spray impact ≤ 1.0 g	Low water resistance (resistant to water spray and some resistance to water penetration under constant contact with increasing pressure)	LOW FLUID LEVELS
	AATCC 127 Hydrostatic Pressure	Measures the ability of a material to resist water penetration under constant contact with increasing pressure	Hydrostatic pressure ≥ 20 cm		
AAMI LEVEL 3	AATCC 42 Impact penetration	Measures the ability of a material to resist water penetration under spray impact	Spray impact ≤ 1.0 g	Moderate water resistance (resistant to water spray and some resistance to water penetration under constant contact with increasing pressure)	MODERATE FLUID LEVELS
	AATCC 127 Hydrostatic Pressure	Measures the ability of a material to resist water penetration under constant contact with increasing pressure	Hydrostatic pressure ≥ 20 cm		
AAMI LEVEL 4	ASTM F1671 Viral Penetration Test	Measures the resistance to penetration by blood borne pathogens using a surrogate microbe under conditions of continuous liquid contact.	Pass	Blood and viral penetration resistance (2 psi)	HIGH FLUID LEVELS

The Association for the Advancement of Medical Instrumentation (AAMI) standards are designed to help medical-device companies meet global standards for the safe use of medical devices. ANSI/AAMI PB70:2012

DISPOSABLE ISOLATION GOWNS

Our Level 1, 2 and 3 gowns are intended to be used in situations where minimal, low, and moderate fluid barrier protection is needed. Level 4 gowns are prepared for the highest fluid and microbial barrier protection to protect the user against long, fluid-intensive procedures. Also for operations on patients with potential blood-borne pathogen risk.
